Moses Sinyanga

At nine years, Moses has had more fractures than his age. According to his father, Moses' bones would break suddenly even without falls or accidents. The problem was first noticed when he was a few months old and since then, treating fractures has become part of Moses's life. When they first consulted with a referral hospital in Eastern Uganda, they were informed that the baby lacked calcium and were advised on a specific calcium rich diet and pain killers to manage the pain.

Even after years of careful feeding to Moses, the strength of his bones has not improved. He still gets mysterious fractures and this prompted the father to seek specialist's advice at CoRSU.

At, CoRSU Moses was diagnosed with pseudo arthritis of the femur. He presented with fractures in both his thighs. Although the condition is incurable, the father was relieved to put a name on what was the problem with his son.

After a series of surgeries at CoRSU hospital, Amos could not afford his Son's hospital stay bill he sought the help of the hospital, and that is when Interface came to his rescue.
